

News Release

EMBARGOED UNTIL RELEASE AT 8:30 a.m. EDT, Thursday, March 30, 2023

BEA 23-12

Technical:	Lisa Mataloni (GDP)	(301) 278-9083	gdpniwd@bea.gov
	Kate Pinard (Corporate Profits)	(301) 278-9417	cpniwd@bea.gov
Media:	Connie O'Connell	(301) 278-9003	Connie.OConnell@bea.gov

Gross Domestic Product (Third Estimate), Corporate Profits, and GDP by Industry, Fourth Quarter and Year 2022

Real gross domestic product (GDP) increased at an annual rate of 2.6 percent in the fourth quarter of 2022 (table 1), according to the "third" estimate released by the Bureau of Economic Analysis. In the third quarter, real GDP increased 3.2 percent.

The GDP estimate released today is based on more complete source data than were available for the "second" estimate issued last month. In the second estimate, the increase in real GDP was 2.7 percent. The revision primarily reflected downward revisions to exports and consumer spending (refer to "Updates to GDP"). Imports, which are a subtraction in the calculation of GDP, were revised down.

U.S. Bureau of Economic Analysis

Seasonally adjusted annual rates

The increase in **real GDP** primarily reflected increases in private inventory investment, consumer spending, nonresidential fixed investment, federal government spending, and state and local government spending that were partly offset by decreases in residential fixed investment and exports. Imports decreased (table 2).

The increase in private inventory investment was led by manufacturing (mainly petroleum and coal products) as well as mining, utilities, and construction (led by utilities). The increase in consumer spending reflected an increase in services that was partly offset by a decrease in goods. Within services, the increase was led by health care as well as housing and utilities. Within goods, the leading contributor to the decrease was “other” durable goods (mainly jewelry). Within nonresidential fixed investment, increases in structures and intellectual property products (mainly software) were partly offset by a decrease in equipment. The increase in federal government spending was led by nondefense spending. The increase in state and local government spending primarily reflected an increase in the compensation of state and local government employees.

Within residential fixed investment, the leading contributors to the decrease were new single-family construction and brokers’ commissions. Within exports, a decrease in goods (led by nondurable goods excluding petroleum) was partly offset by an increase in services (led by travel as well as transport). Within imports, both goods (led by durable consumer goods) and services (led by transport) decreased.

Real GDP decelerated in the fourth quarter, increasing 2.6 percent after increasing 3.2 percent in the third quarter. The deceleration primarily reflected a downturn in exports and decelerations in consumer spending, nonresidential fixed investment, and state and local government spending. These movements were partly offset by an upturn in private inventory investment, a smaller decrease in residential fixed investment, and an acceleration in federal government spending. Imports decreased less in the fourth quarter than in the third quarter.

Current-dollar GDP increased 6.6 percent at an annual rate in the fourth quarter, or \$414.1 billion, to a level of \$26.14 trillion, a downward revision of 0.1 percentage point, or \$7.0 billion, from the previous estimate (tables 1 and 3). More information on the source data that underlie the estimates is available in the "[Key Source Data and Assumptions](#)" file on BEA’s website.

The **price index for gross domestic purchases** increased 3.6 percent in the fourth quarter, the same as previously estimated (table 4). The **PCE price index** increased 3.7 percent, the same as previously estimated. Excluding food and energy prices, the PCE price index increased 4.4 percent, an upward revision of 0.1 percentage point.

Personal Income

Current-dollar personal income increased \$398.8 billion in the fourth quarter, an upward revision of \$10.8 billion. The increase primarily reflected increases in compensation (led by private wages and salaries) and government social benefits (table 8). Within government social benefits, the increase primarily reflected an increase in “other” benefits reflecting state stimulus payments to individuals in the form of one-time refundable tax credits. **Disposable personal income** increased \$403.0 billion, or 8.9 percent, an upward revision of \$10.9 billion from the previous estimate. **Real disposable personal income** increased 5.0 percent, an upward revision of 0.2 percentage point from the previous estimate.

Personal saving was \$758.8 billion in the fourth quarter, an upward revision of \$3.8 billion from the previous estimate. The **personal saving rate**—personal saving as a percentage of disposable personal income—was 4.0 percent, an upward revision of 0.1 percentage point from the previous estimate.

Gross Domestic Income and Corporate Profits

Real gross domestic income (GDI) decreased 1.1 percent in the fourth quarter, in contrast to an increase of 2.8 percent in the third quarter. The **average of real GDP and real GDI**, a supplemental measure of U.S. economic activity that equally weights GDP and GDI, increased 0.7 percent in the fourth quarter, compared with an increase of 3.0 percent in the third quarter (table 1).

Profits from current production (corporate profits with inventory valuation and capital consumption adjustments) decreased \$60.5 billion in the fourth quarter, compared with a decrease of \$1.3 billion in the third quarter (table 10).

Profits of domestic financial corporations decreased \$59.0 billion in the fourth quarter, compared with a decrease of \$1.8 billion in the third quarter. **Profits of domestic nonfinancial corporations** decreased \$22.9 billion, in contrast to an increase of \$16.1 billion. **Rest-of-the-world profits** increased \$21.4 billion, in contrast to a decrease of \$15.5 billion. In the fourth quarter, receipts increased \$7.2 billion, and payments decreased \$14.2 billion.

Updates to GDP

With the third estimate, downward revisions to exports and consumer spending were partly offset by upward revisions to nonresidential fixed investment, residential fixed investment, and state and local government spending. Imports, which are a subtraction in the calculation of GDP, were revised down. For more details, refer to the [Technical Note](#). For information on updates to GDP, refer to the "Additional Information" section that follows.

	<u>Advance Estimate</u>	<u>Second Estimate</u>	<u>Third Estimate</u>
	(Percent change from preceding quarter)		
Real GDP	2.9	2.7	2.6
Current-dollar GDP	6.5	6.7	6.6
Real GDI	-1.1
Average of Real GDP and Real GDI	0.7
Gross domestic purchases price index	3.2	3.6	3.6
PCE price index	3.2	3.7	3.7
PCE price index excluding food and energy	3.9	4.3	4.4

Real GDP by Industry

Today’s release includes estimates of **GDP by industry**, or value added—a measure of an industry’s contribution to GDP. In the fourth quarter, private goods-producing industries increased 4.0 percent, private services-producing industries increased 2.3 percent, and government increased 2.1 percent (table 12). Overall, 17 of 22 industry groups contributed to the fourth-quarter increase in real GDP.

- Within private goods-producing industries, the increase was led by durable goods manufacturing and mining. Partly offsetting these increases was a decrease in construction.
- Within private services-producing industries, the leading contributors to the increase were professional, scientific, and technical services; retail trade; health care and social assistance; and information. Notable offsets include decreases in finance and insurance as well as real estate and rental and leasing.

U.S. Bureau of Economic Analysis Seasonally adjusted annual rates

- The increase in government reflected increases in both federal government as well as state and local government.

Contributions to Percent Change in Real GDP by Industry Group, 2022:Q4

Real GDP increased 2.6 percent

U.S. Bureau of Economic Analysis

Seasonally adjusted annual rates

Gross Output by Industry

Real gross output—principally a measure of an industry’s sales or receipts, which includes sales to final users in the economy (GDP) and sales to other industries (intermediate inputs)—increased 1.0 percent. In the fourth quarter, private goods-producing industries increased 2.4 percent, private services-producing industries increased 0.1 percent, and government increased 3.4 percent (table 16). Overall, 11 of 22 industry groups contributed to the increase in real gross output.

GDP for 2022

Real GDP increased 2.1 percent in 2022 (from the 2021 annual level to the 2022 annual level), compared with an increase of 5.9 percent in 2021 (table 1). The increase in real GDP in 2022 primarily reflected increases in consumer spending, exports, private inventory investment, and nonresidential fixed investment that were partly offset by decreases in residential fixed investment and federal government spending. Imports increased (table 2).

Current-dollar GDP increased 9.2 percent, or \$2.15 trillion, in 2022 to a level of \$25.46 trillion, compared with an increase of 10.7 percent, or \$2.25 trillion, in 2021 (tables 1 and 3).

The **price index for gross domestic purchases** increased 6.8 percent in 2022, compared with an increase of 4.2 percent in 2021 (table 4). The **PCE price index** increased 6.3 percent, compared with an increase of 4.0 percent. Excluding food and energy prices, the PCE price index increased 5.0 percent, compared with an increase of 3.5 percent.

Measured from the fourth quarter of 2021 to the fourth quarter of 2022, real GDP increased 0.9 percent during the period (table 5), compared with an increase of 5.7 percent from the fourth quarter of 2020 to the fourth quarter of 2021.

The price index for gross domestic purchases, as measured from the fourth quarter of 2021 to the fourth quarter of 2022, increased 6.2 percent, compared with an increase of 5.8 percent from the fourth quarter of 2020 to the fourth quarter of 2021. The PCE price index increased 5.7 percent, the same increase as from the fourth quarter of 2020 to the fourth quarter of 2021. Excluding food and energy, the PCE price index increased 4.8 percent, compared with an increase of 4.7 percent.

Gross Domestic Income and Corporate Profits for 2022

Real GDI increased 2.3 percent in 2022, compared with an increase of 5.5 percent in 2021 (table 1). **The average of real GDP and real GDI** increased 2.2 percent in 2022, compared with an increase of 5.7 percent in 2021.

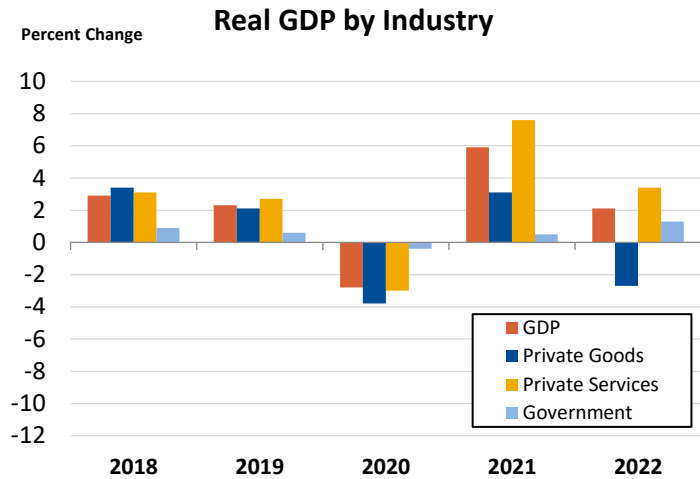

In 2022, **profits from current production** increased \$181.5 billion, compared with an increase of \$511.0 billion in 2021. Profits of domestic financial corporations decreased \$52.0 billion, in contrast to an increase of \$69.0 billion (table 10). Profits of domestic nonfinancial corporations increased \$192.3 billion, compared with an increase of \$459.2 billion. Rest-of-the-world profits increased \$41.2 billion, in contrast to a decrease of \$17.3 billion.

	<u>Advance Estimate</u>	<u>Second Estimate</u>	<u>Third Estimate</u>
	(Percent change from 2021 annual level to 2022 annual level)		
Real GDP	2.1	2.1	2.1
Current-dollar GDP	9.2	9.2	9.2
Real GDI	2.3
Average of Real GDP and Real GDI	2.2
Gross domestic purchases price index	6.8	6.8	6.8
PCE price index	6.2	6.3	6.3
PCE price index excluding food and energy	5.0	5.0	5.0
	(Percent change from fourth quarter 2021 to fourth quarter 2022)		
Real GDP	1.0	0.9	0.9
Real GDI	0.4
Average of Real GDP and Real GDI	0.6
Gross domestic purchases price index	6.1	6.2	6.2
PCE price index	5.5	5.7	5.7
PCE price index excluding food and energy	4.7	4.8	4.8

Real GDP by Industry for 2022

In 2022, private goods-producing industries decreased 2.8 percent, private services-producing industries increased 3.4 percent, and government increased 1.3 percent. Overall, 15 of 22 industry groups contributed to the increase in real GDP (table 13).

- Within private goods-producing industries the leading contributor to the decrease was construction.
- Within private services-producing industries, an increase in professional, scientific, and technical services was partly offset by a decrease in retail trade.
- The increase in government reflected an increase in state and local government.

U.S. Bureau of Economic Analysis

Contributions to Percent Change in Real GDP by Industry Group, 2022

Real GDP increased 2.1 percent

U.S. Bureau of Economic Analysis

Real gross output increased 2.8 percent. In 2022, private goods-producing industries decreased 0.6 percent, private services-producing industries increased 4.3 percent, and government increased 1.0 percent (table 16). Overall, 17 of 22 industry groups contributed to the increase in real gross output.

Definitions

Gross domestic product (GDP), or **value added**, is the value of the goods and services produced by the nation's economy less the value of the goods and services used up in production. GDP is also equal to the sum of personal consumption expenditures, gross private domestic investment, net exports of goods and services, and government consumption expenditures and gross investment.

Gross domestic income (GDI) is the sum of incomes earned and costs incurred in the production of GDP. In national economic accounting, GDP and GDI are conceptually equal. In practice, GDP and GDI differ because they are constructed using largely independent source data.

Gross output is the value of the goods and services produced by the nation's economy. It is principally measured using industry sales or receipts, including sales to final users (GDP) and sales to other industries (intermediate inputs).

Current-dollar estimates are valued in the prices of the period when the transactions occurred—that is, at "market value." Also referred to as "nominal estimates" or as "current-price estimates."

Real values are inflation-adjusted estimates—that is, estimates that exclude the effects of price changes.

The **gross domestic purchases price index** measures the prices of final goods and services purchased by U.S. residents.

The **personal consumption expenditure price index** measures the prices paid for the goods and services purchased by, or on the behalf of, "persons."

Personal income is the income received by, or on behalf of, all persons from all sources: from participation as laborers in production, from owning a home or business, from the ownership of financial assets, and from government and business in the form of transfers. It includes income from domestic sources as well as the rest of world. It does not include realized or unrealized capital gains or losses.

Disposable personal income is the income available to persons for spending or saving. It is equal to personal income less personal current taxes.

Personal outlays is the sum of personal consumption expenditures, personal interest payments, and personal current transfer payments.

Personal saving is personal income less personal outlays and personal current taxes.

The **personal saving rate** is personal saving as a percentage of disposable personal income.

Profits from current production, referred to as corporate profits with inventory valuation adjustment (IVA) and capital consumption (CCAdj) adjustment in the National Income and Product Accounts (NIPAs), is a measure of the net income of corporations before deducting income taxes that is consistent with the value of goods and services measured in GDP. The IVA and CCAdj are adjustments that convert inventory withdrawals and depreciation of fixed assets reported on a tax-return, historical-cost basis to the current-cost economic measures used in the national income and product accounts. Profits for domestic industries reflect profits for all corporations located within the geographic borders of the United States. The rest-of-the-world (ROW) component of profits is measured as the difference between profits received from ROW and profits paid to ROW.

For more definitions, refer to the [Glossary: National Income and Product Accounts](#).

Statistical conventions

Annual-vs-quarterly rates. Quarterly seasonally adjusted values are expressed at annual rates, unless otherwise specified. This convention is used for BEA's featured, seasonally adjusted measures to facilitate comparisons with related and historical data. For details, refer to the FAQ "[Why does BEA publish estimates at annual rates?](#)"

Quarterly not seasonally adjusted values are expressed only at quarterly rates.

Percent changes. Percent changes in quarterly seasonally adjusted series are displayed at annual rates, unless otherwise specified. For details, refer to the FAQ "[How is average annual growth calculated?](#)" and "[Why does BEA publish percent changes in quarterly series at annual rates?](#)" Percent changes in quarterly not seasonally adjusted values are calculated from the same quarter one year ago. All published percent changes are calculated from unrounded data.

Calendar years and quarters. Unless noted otherwise, annual and quarterly data are presented on a calendar basis.

Quantities and prices. Quantities, or "real" volume measures, and prices are expressed as index numbers with a specified reference year equal to 100 (currently 2012). Quantity and price indexes are calculated using a Fisher-chained weighted formula that incorporates weights from two adjacent periods (quarters for quarterly data and annuals for annual data). For details on the calculation of quantity and price indexes, refer to Chapter 4: Estimating Methods in the [NIPA Handbook](#).

Chained-dollar values are calculated by multiplying the quantity index by the current dollar value in the reference year (2012) and then dividing by 100. Percent changes calculated from real quantity indexes and chained-dollar levels are conceptually the same; any differences are due to rounding. Chained-dollar values are not additive because the relative weights for a given period differ from those of the reference year. In tables that display chained-dollar values, a "residual" line shows the difference between the sum of detailed chained-dollar series and its corresponding aggregate.

Updates to GDP

BEA releases three vintages of the current quarterly estimate for GDP. "Advance" estimates are released near the end of the first month following the end of the quarter and are based on source data that are incomplete or subject to further revision by the source agency. "Second" and "third" estimates are released near the end of the second and third months, respectively, and are based on more detailed and more comprehensive data as they become available.

The table below shows the average revisions to the quarterly percent changes in real GDP between different estimate vintages, without regard to sign.

Vintage	Average Revision Without Regard to Sign (percentage points, annual rates)
Advance to second	0.5
Advance to third	0.6
Second to third	0.3
Note - Based on estimates from 1996 through 2021. For more information on GDP updates, refer to Revision Information on the BEA website.	

Annual and comprehensive updates are released in late September. Annual updates generally cover at least the 5 most recent calendar years (and their associated quarters) and incorporate newly available major annual source data as well as some changes in methods and definitions to improve the accounts. Comprehensive (or benchmark) updates are carried out at about 5-year intervals and incorporate major periodic source data, as well as major conceptual improvements.

Unlike GDP, advance current quarterly estimates of GDI and corporate profits are not released because data on domestic profits and on net interest of domestic industries are not available. For fourth quarter estimates, these data are not available until the third estimate.

GDP by industry and gross output estimates are released with the third estimate of GDP.

r Revised

1. Real gross domestic income is gross domestic income deflated by the implicit price deflator for gross domestic product.

Note. Users are cautioned that particularly for components that exhibit rapid change in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series. For accurate estimates of the contributions to percent changes in real gross domestic product, use table 2.

^r Revised

¹ Real gross domestic income is gross domestic income deflated by the implicit price deflator for gross domestic product.

Note. Users are cautioned that particularly for components that exhibit rapid change in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series. For accurate estimates of the contributions to percent changes in real gross domestic product, use table 2.

r Revised

1. Food excludes personal consumption expenditures for purchased meals and beverages, which are classified in food services.

2. This index is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most implicit prices (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

r Revised

1. Gross domestic income deflated by the implicit price deflator for gross domestic product.

2. Food excludes personal consumption expenditures for purchased meals and beverages, which are classified in food services.

3. This index is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most implicit prices (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

Note. Estimates under the *Percent change from the preceding year* columns are calculated from annual data. Estimates under the *Percent change from fourth quarter to fourth quarter* columns are calculated from fourth quarter values relative to the same quarter one year prior.

r Revised

1. Personal income is also equal to national income less corporate profits with inventory valuation and capital consumption adjustments, taxes on production and imports less subsidies, contributions for government social insurance, net interest and miscellaneous payments, business current transfer payments (net), and current surplus of government enterprises, plus personal income receipts on assets, and personal current transfer receipts.

2. The current-dollar measure is deflated by the implicit price deflator for personal consumption expenditures.

r Revised

1. The current-dollar gross value added is deflated using the gross value added chain-type price index for nonfinancial industries from the GDP-by-industry accounts. For periods when this price index is not available, the chain-type price index for GDP goods and structures is used.

2. Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of the chain-type quantity index and the 2012 current-dollar value of the corresponding series, divided by 100.

3. Chained-dollar net value added of nonfinancial corporate business is the difference between the gross value added and the consumption of fixed capital.

4. The deflator for gross value added of nonfinancial corporate business divided by 100.

Note. Estimates in this table are based on the 2012 North American Industry Classification System (NAICS).

1. Consists of agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing.

2. Consists of utilities; wholesale trade; retail trade; transportation and warehousing; information; finance, insurance, real estate, rental, and leasing; professional and business services; educational services, health care, and social assistance; arts, entertainment, recreation, accommodation, and food services; and other services, except government.

Note. Percentage-point contributions do not sum to the percent change in real gross domestic product because the industry details are calculated using source data and methodologies that differ from those used to calculate growth in the top-line, expenditure-based measure of real GDP.
