## Producer Price Indexes -- January 2004

The Producer Price Index for Finished Goods advanced 0.6 percent in January, seasonally adjusted, the Bureau of Labor Statistics of the U.S. Department of Labor reported today. This increase followed a 0.2-percent gain in December and a 0.2-percent decline in November. Rising prices for gasoline led the increase in the finished goods index in January. At the earlier stages of processing, prices received by manufacturers of intermediate goods moved up 0.8 percent in January, after rising 0.4 percent in the prior month. The crude goods index increased 2.8 percent, compared with a 2.2-percent rise in December. (See table A.)

**Table A. Monthly and annual percent changes in selected stage-of-processing price indexes, seasonally adjusted**

Month	Finished goods					Inter- mediate goods	Crude goods
	Total	Foods	Energy	Except foods and energy	Change in finished goods from 12 months ago (unadj.)		
2003							
Jan.	1.3	1.9	4.8	0.3	2.5	1.1	7.3
Feb.	1.2	.4	7.4	-.1	3.3	1.9	5.2
Mar.	1.3	.3	4.8	.6	4.0	2.1	13.2
Apr.	-1.5	.8	-7.2	-.5	2.4	-2.3	-15.8
May	-.4	.1	-3.1	.1	2.5	-.7	1.5
June	.6	.4	2.9	0	2.9	.6	4.3
July	.1	-.3	.5	.1	3.0	.2	-2.8
Aug.	.5	.8	1.4	.1	3.5	.6	-1.0
Sept.	.2	1.2	-.1	0	3.5	-.1	2.7
Oct.	.7	2.1	-.3	.5	3.4	.3	3.1
Nov.	-.2	-.3	-.9	0	3.4	-.1	.1
Dec.	.2	.1	1.6	-.1	4.0	.4	2.2
2004							
Jan.	.6	-1.4	4.7	.3	3.3	.8	2.8

NOTE: Some of the percent changes shown here and elsewhere in this release may differ from those previously reported because seasonal adjustment factors have been recalculated to reflect developments during 2003. In addition, indexes for September 2003 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

Among finished goods, the index for finished energy goods jumped 4.7 percent in January, following a 1.6-percent advance in the previous month. Excluding prices for gasoline, the finished goods index rose 0.2 percent in January. Prices for finished goods other than foods and energy increased 0.3 percent, after edging down 0.1 percent in the preceding month. By contrast, the finished consumer foods index dropped 1.4 percent in January, after inching up 0.1 percent a month earlier.

Before seasonal adjustment, the Producer Price Index for Finished Goods advanced 0.6 percent to 145.4 (1982=100). From January 2003 to January 2004, finished goods prices rose 3.3 percent. During the same period, the indexes for finished energy goods, finished consumer foods, and finished goods other than foods and energy moved up 11.4, 4.2, and 0.9 percent, respectively. At the earlier stages of processing, prices for intermediate goods increased 3.8 percent for the 12 months ended in January 2004, while the index for crude goods jumped 13.7 percent.

### **Finished goods**

Prices for finished energy goods increased 4.7 percent in January, after registering a 1.6-percent gain in the prior month. Leading this acceleration, the gasoline index surged 14.1 percent, following a 3.4-percent rise in December. Prices for home heating oil and liquefied petroleum gas also advanced at a faster rate in January than they did a month earlier. The index for residential natural gas turned up, following a decline in the previous month. On the other hand, the rate of increase for residential electric power prices slowed from 0.5 percent in December to 0.1 percent in January.

**Table B. Monthly and annual percent changes in selected price indexes for intermediate goods and crude goods, seasonally adjusted**

Month	Intermediate goods				Crude goods			
	Foods	Energy	Except foods and energy	Change in intermediate goods from 12 months ago (unadj.)	Foods	Energy (unadj.)	Except foods and energy	Change in crude goods from 12 months ago (unadj.)
2003								
Jan.	1.4	4.5	0.4	4.5	4.5	13.0	0.9	28.7
Feb.	.8	7.7	.7	6.6	.6	9.9	3.6	36.7
Mar.	-2	10.0	.3	8.0	-1.3	30.1	-.2	46.8
Apr.	.2	-10.9	-.2	4.6	1.4	-30.7	-1.2	18.2
May	1.2	-4.2	.1	4.2	1.9	1.9	-.1	19.1
June	1.8	3.1	0	4.5	-.8	10.5	.2	29.1
July	-.9	1.5	-.1	4.4	-2.5	-4.8	1.9	24.2

Oct.	2.6	.1	.3	3.4	8.2	-1.8	2.6	22.8
Nov.	2.7	-2.0	.2	3.3	0	-1.5	4.1	18.3
Dec.	-.5	1.8	.1	3.9	-.2	4.3	3.0	18.5
2004								
Jan.	-1.0	2.7	.6	3.8	-6.9	12.5	3.3	13.7

NOTE: Some of the percent changes shown here and elsewhere in this release may differ from those previously reported because seasonal adjustment factors have been recalculated to reflect developments during 2003. In addition, indexes for September 2003 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

The index for finished consumer goods other than foods and energy turned up 0.3 percent in January, compared with a 0.1-percent decrease in the preceding month. Light motor truck prices increased 1.1 percent, following a 1.7-percent decline in December. The indexes for passenger cars, periodical circulation, and for sporting and athletic goods also advanced in January, after decreasing a month earlier. Prices for pharmaceutical preparations and book publishing rose more in January than they did in the previous month, while the cigarettes index increased, after showing no change in December. Alternatively, household furniture prices inched down 0.1 percent in January, following a rise of the same magnitude in the prior month.

Subsequent to a 0.1-percent decrease in December, the capital equipment index advanced 0.3 percent in January. The indexes for light motor trucks and passenger cars turned up, following declines in December. Prices for heavy motor trucks, construction machinery and equipment, and civilian aircraft rose at a faster pace in January than they did a month earlier, while the truck trailers index moved up after showing no change in the preceding month. By contrast, commercial furniture prices fell 0.4 percent in January, compared with a 0.1-percent gain in the prior month. The integrating and measuring instruments index also turned down, following an increase in December. Prices for x-ray and electromedical equipment fell more than they did in the previous month.

Prices for finished consumer foods decreased 1.4 percent in January, following a 0.1 percent increase a month earlier. Leading this downturn, the index for fresh and dry vegetables dropped 20.9 percent, following a 20.7-percent upsurge in December. Prices for eggs for fresh use also fell, after rising in the prior month. The beef and veal index declined at a faster rate than it did in the previous month. Prices for citrus fruits rose less in January than they did in December. By contrast, the index for soft drinks advanced 1.9 percent, compared with a 0.7-percent decrease in the preceding month. Prices for pork and bakery products also turned up in January, following declines a month earlier. The indexes for processed young chickens, finfish and shellfish, and shortening and cooking oils rose at a quicker pace than they did in December.

### **Intermediate goods**

The Producer Price Index for Intermediate Materials, Supplies, and Components climbed 0.8 percent in January, compared with a 0.4-percent advance in December. Prices for intermediate energy goods, materials for nondurable manufacturing, and materials for durable manufacturing increased at a faster rate in January than they did in December. The index for materials and components for construction turned up, after edging down in the preceding month. On the other hand, the index for intermediate foods and feeds fell at a quicker pace in January than it did a month earlier. Excluding foods and energy, prices for intermediate materials advanced 0.6 percent, after inching up at a 0.1-percent rate in December. (See table B.)

The index for intermediate energy goods jumped 2.7 percent in January, following a 1.8-percent increase in December. A surge in gasoline prices of 14.1 percent followed a 3.4-percent increase in December. The indexes for home heating oil, jet fuel, liquefied petroleum gas, and diesel fuel also advanced at a faster pace than they did in the prior month. Prices for industrial natural gas turned up in January, while the index for industrial electric power fell less than it did in December. By contrast, prices for natural gas to electric utilities declined 6.2 percent in January, compared with a 4.8-percent gain in the previous month. The indexes for commercial electric power and commercial natural gas also turned down in January.

Prices for materials for nondurable manufacturing climbed 1.3 percent in January, following a 0.4-percent increase in December. The index for liquid refinery gases surged 16.2 percent, after rising 7.4 percent in the previous month. The indexes for plastic resins and materials, inedible fats and oils, medicinal and botanical chemicals, and gray fabrics moved up in January, following declines in December. On the other hand, paperboard prices decreased 1.2 percent in January, after inching up at a 0.1-percent rate a month earlier. The index for nitrates also turned down, while prices for paper fell more than they did in the preceding month.

The index for materials and components for construction increased 0.3 percent in January, compared with a 0.1-percent decline in December. Softwood lumber prices jumped 1.5 percent in January, following a 0.3-percent decrease in the prior month. The indexes for wiring devices, hardwood lumber, and prefabricated wood buildings and components also rose, after falling in December. Prices for fabricated structural metal products, steel mill products, plastic construction products, and millwork advanced at a quicker rate than they did in the preceding month. Alternatively, the index for concrete products edged up 0.1 percent in January, following a 0.5-percent gain in December. Plywood prices fell more than they did a month earlier, while the indexes for gypsum products and for air conditioning and refrigeration equipment turned down in January.

Prices for materials for durable manufacturing climbed 1.0 percent in January, after posting a 0.5-percent gain in December. The index for primary nonferrous metals jumped 4.3 percent, following a 2.4-percent rise in the previous month. Prices for copper and brass mill shapes; semifinished steel mill products; cold finished steel bars; and hot rolled steel bars, plates, and structural shapes also increased more than in December. The indexes for hardwood lumber and industrial textile products advanced, following December declines. Conversely, prices for aluminum mill shapes turned down 0.4 percent in January, after inching up at a 0.1-percent rate a month earlier. The index for plywood fell more quickly in January, while prices for cold rolled steel sheet and strip rose more slowly than they did in the prior month.

The index for intermediate foods and feeds fell 1.0 percent in January, compared with a 0.5-percent decrease in December. This faster rate of decline can be attributed mainly to prices for beef and veal products, which dropped 11.0 percent in January after a 5.6-percent decrease in December. In addition, the indexes for fluid milk products and for portion control meat and meat-type products also fell at a quicker pace, while prices for confectionery materials and liquid milk products rose at a slower rate in January than they did a month earlier. The indexes for flour and for refined sugar and sugar byproducts turned down, after rising in December. By contrast, prepared animal feed prices advanced 0.2 percent, after declining 0.4 percent in the previous month. The pork index also turned up in January. Prices for shortening and cooking oils and processed young chickens increased more in January than they did in December.

### **Crude goods**

The Producer Price Index for Crude Materials for Further Processing advanced at a 2.8-percent rate in January, after posting a 2.2-percent gain in December. Price increases for crude energy materials were larger in January than in December and outweighed larger price decreases for crude foodstuffs and feedstuffs. In addition, the index for basic industrial materials rose at a slightly faster pace than it did in December. (See table B.)

The index for crude energy materials climbed 12.5 percent in January, following a 4.3-percent increase in December. Natural gas prices led the acceleration by surging 17.8 percent, after advancing 6.1 percent in the previous month. The index for crude petroleum rose 8.1 percent in January, compared with a 2.6-percent gain a month earlier. On the other hand, coal prices dropped 1.6 percent, subsequent to a 0.4-percent rise in December.

The index for crude nonfood materials less energy gained 3.3 percent in January, its eighth consecutive increase, after rising 3.0 percent in December. The index for raw cotton increased 6.8 percent, following a 10.1-percent decline in the prior month. Prices for wastepaper also turned up, while indexes for aluminum base scrap and construction sand, gravel, and crushed stone rose more in January than they did in December. Conversely, the rate of increase for iron and steel scrap prices slowed from 8.8 percent in December to 5.7 percent in January. Prices for copper ores, gold ores, and copper base scrap also rose less in January than they did in the prior month.

The index for crude foodstuffs and feedstuffs fell 6.9 percent in January, following a 0.2-percent drop in December. January prices for slaughter cattle declined 17.4 percent, after slipping 3.5 percent the preceding month. Indexes for fresh vegetables (except potatoes), slaughter broilers and fryers, and wheat turned down in January. By contrast, prices for fluid milk fell 1.4 percent in January, after dropping 7.7 percent in December. The January index for slaughter turkeys rose more than in December, as did the indexes for corn, soybeans, and Irish potatoes for further processing. Unprocessed shellfish prices rose after falling.

### **Net output price indexes for mining, manufacturing, and services industries**

**Mining.** The Producer Price Index for the Net Output of Total Mining Industries rose 11.3 percent in January, following a 4.2-percent increase in December. (Net output price indexes are not seasonally adjusted.) Prices received by the oil and gas extraction industry group jumped 16.0 percent, after advancing 5.2 percent in the prior month. The industry group indexes for metal ore mining and coal mining also increased at a quicker rate than they did a month earlier. Prices received by the mining support activities industry group rose in January. In January, the Producer Price Index for the Net Output of Total Mining Industries was 141.6 (December 1984=100), 12.4 percent above its year ago level.

**Manufacturing.** The Producer Price Index for the Net Output of Total Manufacturing Industries increased 0.9 percent in January, after showing no change in the previous month. Prices received by the petroleum and coal products industry group rose 11.8 percent, compared with a 1.4-percent gain in the preceding month. The industry group indexes for chemicals, fabricated metal products, aerospace products and parts, and primary metals also advanced at a quicker rate than they did in December. Prices received by the automobile and light duty motor vehicle industry turned up, after falling in the prior month. By contrast, the industry group index for food manufacturing dropped 1.0 percent in January, after registering a 0.5-percent decline a month earlier. The industry group index for semiconductors and other electronic components also fell more than it did in the preceding month. Prices received by the industry group for communications equipment turned down in January, following gains in the previous month. The plastics and rubber products industry group index showed no change, after rising in December. In January, the Producer Price Index for the Net Output of Total Manufacturing Industries was 138.9 (December 1984=100), 2.4 percent above its year ago level.

**Services.** Among service industries in January, prices received by the industries for general medical and surgical hospitals, portfolio management, offices of physicians (except mental health), direct property and casualty insurance carriers, nursing care facilities, couriers, and newspaper publishers increased. Conversely, prices received by the industries for scheduled passenger air transportation, television broadcasting, lessors of nonresidential buildings (except miniwarehouse), software publishers, radio stations, passenger car rental, and long distance general freight trucking (truckload) fell in January.

\*\*\*\*\*

The Producer Price Index data for January 2004 in this release were originally scheduled for release on Feb. 19, 2004.

The date of release for the February 2004 Producer Price Index data, originally scheduled for March 12, 2004, will be announced as soon as possible.

### NAICS Conversion

The net output price indexes have been converted from the 1987 Standard Industrial Classification (SIC) basis to the 2002 North American Industry Classification System (NAICS) basis with the release of January 2004 indexes. The NAICS conversion involves major definitional changes to many of the currently published SIC-based indexes. SIC-based indexes are no longer produced or published. Historical index data based on the NAICS publication structure are available depending on the scope of the definitional changes between SIC and NAICS. A concordance between the two structures is available at <http://www.bls.gov/ppi/ppinaics.htm> through a World Wide Web site.

For more information contact the Division of Industrial Prices and Price Indexes, Section of Index Analysis and Public Information at [ppi-info@bls.gov](mailto:ppi-info@bls.gov) or (202) 691-7705.

### Recalculation of Seasonal Adjustment Factors

Effective with this release, seasonal adjustment factors have been recalculated to reflect price-movement patterns during 2003 for stage-of-processing (SOP) and commodity-grouping indexes. This routine annual recalculation may affect previously published seasonally adjusted indexes and percent changes for January 1999 through December 2003. To request this information, contact the Division of Industrial Prices and Price Indexes, Section of Index Analysis and Public Information at [ppi-info@bls.gov](mailto:ppi-info@bls.gov) or (202) 691-7705.

The table below provides monthly seasonally adjusted percent changes for the three major SOP categories during 2003, based on former and recalculated seasonal factors. These percent changes include final price data through August 2003 and may differ from values shown elsewhere in this release.

#### Over-the-month percent changes in major stage-of-processing indexes, seasonally adjusted, using former and recalculated seasonal factors for 2003

Month	Finished Goods		Intermediate Goods		Crude Goods	
	Former	Recalculated	Former	Recalculated	Former	Recalculated
January	1.4	1.3	1.2	1.1	7.6	7.3
February	1.1	1.2	2.0	1.9	5.2	5.2
March	1.4	1.3	2.1	2.1	13.0	13.2
April	-1.7	-1.5	-2.3	-2.3	-15.8	-15.8
May	-.4	-.4	-.7	-.7	1.4	1.5
June	.5	.6	.5	.6	4.4	4.3
July	.1	.1	.1	.2	-3.0	-2.8
August	.6	.5	.6	.6	-1.1	-1.0
September	.2	.2	-.2	-.1	3.5	3.4
October	.8	.7	.4	.4	2.6	2.4
November	-.3	-.2	-.2	-.1	.2	.1
December	.3	.2	.5	.4	2.0	2.2

### Resampling of Industries

Effective with this release, the Producer Price Index (PPI) includes data for 65 resampled and 21 newly introduced industries classified according to the North American Industry Classification System (NAICS). The Bureau of Labor Statistics periodically updates the sample of producers providing data for the PPI to reflect current conditions more accurately when the structure, membership, technology, or product mix of an industry shifts. The first results of this systematic process were published in July 1986. Subsequent efforts have been completed at 6-month intervals.

For information on specific index additions, deletions, and recodes that are effective with this semiannual update, see the January 2004 issue of the *PPI Detailed Report* or contact the Division of Industrial Prices and Price Indexes, Section of Index Analysis and Public Information at [ppi-info@bls.gov](mailto:ppi-info@bls.gov) or (202) 691-7705.

#### NAICS

<i>Code</i>	<i>Industry</i>
213111	Drilling oil and gas wells
221110	Electric power generation*
221121	Electric bulk power transmission and control*
221122	Electric power distribution
221210	Natural gas distribution
311222	Soybean processing
311225	Fats and oils refining and blending
311813	Frozen cakes, pies, and other pastries
312113	Ice manufacturing
313311	Broadwoven fabric finishing mills
314991	Rope, cordage, and twine mills
314992	Tire cord and tire fabric mills
315119	Other hosiery and sock mills
315192	Underwear and nightwear knitting mills
315221	Men's and boys' cut and sew underwear and nightwear
315231	Women's and girls' cut and sew lingerie
315291	Infants' cut and sew apparel
315992	Gloves and mittens
321113	Sawmills
321213	Engineered wood member (except truss) manufacturing
321214	Truss manufacturing
321911	Wood windows and doors
321912	Cut stock, resawing lumber, and planing
321918	Other millwork (including flooring)
321920	Wood containers and pallets
321991	Manufactured homes (mobile homes)
322215	Sanitary food containers (except folding)
326211	Tire manufacturing (except retreading)
327111	Vitreous plumbing fixtures and fittings
327113	Porcelain electrical supply manufacturing
327211	Flat glass manufacturing
327213	Glass container manufacturing
331319	Other aluminum rolling and drawing
331421	Copper rolling, drawing, and extruding
331422	Copper wire (except mechanical) drawing
331491	Other nonferrous metal rolling, drawing, and extruding
331511	Iron foundries
331512	Steel investment foundries
331513	Steel foundries (except investment)
332322	Sheet metal work

531312	Nonresidential property managers
531320	Offices of real estate appraisers
531390	Other activities related to real estate
541330	Engineering services
621610	Home health care services

\* For further discussion of these newly introduced PPIs, see "New Producer Price Indexes for Electric Power Generation, NAICS 221110, and Electric Bulk Power Transmission and Control, NAICS 221121" and "PPI Introduces Industries to Complete Coverage of the Retail Trade Sector" in the January 2004 issue of the *PPI Detailed Report*, or call the Section of Index Analysis and Public Information at (202) 691-7705.

## Technical Note

### Brief Explanation of Producer Prices Indexes

The Bureau of Labor Statistics (BLS) term Producer Price Index (PPI) refers to a family of indexes that measure the average change over time in the prices received by domestic producers of goods and services. PPIs measure price change from the perspective of the seller. This contrasts with other measures, such as the Consumer Price Index (CPI); CPIs measure price change from the purchaser's perspective. Sellers' and purchasers' prices can differ due to government subsidies, sales and excise taxes, and distribution costs.

More than 8,000 PPIs for individual products and groups of products are released each month. PPIs are available for the products of virtually every industry in the mining and manufacturing sectors of the U.S. economy. New PPIs are gradually being introduced for the products of industries in the trade, finance, and services sectors of the economy.

More than 100,000 price quotations per month are organized into three sets of PPIs: (1) Stage-of-processing indexes; (2) commodity indexes; and (3) indexes for the net output of industries and their products. The stage-of-processing structure organizes products by class of buyer and degree of fabrication. The commodity structure organizes products by similarity of end use or material composition. The entire output of various industries is sampled to derive price indexes for the net output of industries and their products.

#### Stage-of-Processing Indexes

Within the stage-of-processing system, finished goods are commodities that will not undergo further processing and are ready for sale to the final-demand user, either an individual consumer or business firm. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durable goods such as automobiles, household furniture, and appliances, as well as nondurable goods such as apparel and home heating oil. Capital equipment includes producer durable goods such as heavy motor trucks, tractors, and machine tools.

The stage-of-processing category for intermediate materials, supplies, and components consists partly of commodities that have been processed but require further processing. Examples of such semifinished goods include flour, cotton yarn, steel mill products, and lumber. The intermediate goods category also encompasses nondurable, physically complete items purchased by business firms as inputs for their operations. Examples include diesel fuel, belts and belting, paper boxes, and fertilizers.

Crude materials for further processing are products entering the market for the first time that have not been manufactured or fabricated and that are not sold directly to consumers. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, coal, hides and skins, and iron and steel scrap.

#### Commodity Indexes

The commodity classification structure of the PPI organizes products by similarity of end use or material composition, disregarding industry of origin. Fifteen major commodity groupings (2-digit commodity codes) make up the All Commodities Index. Each major commodity grouping includes (in descending order of aggregation) subgroups (3-digit), product classes (4-digit), subproduct classes (6-digit), and individual items (8 digit). Nearly all 8-digit commodities under the traditional commodity coding system are now derived from corresponding industry-classified product indexes. In such instances, movements in the traditional commodity price indexes and corresponding percent changes will be virtually identical to their industry-based counterparts, even if their index levels differ.

#### Industry Net-Output Price Indexes

PPIs for the net output of industries and their products are grouped according to the North American Industry Classification System (NAICS). Prior to the release of January 2004, industry-based PPIs were published according to the Standard Industrial Classification (SIC) system. Industry price indexes are compatible with other economic time series organized by industry, such as data on employment, wages, and productivity. Table 5 of the *PPI Detailed Report* includes data for NAICS industries and industry groups (3-, 4-, 5-, and 6-digit codes); indexes for Census product classes (7- and 8-digits), products (9-digits), and more detailed subproducts (11-digits); and, for some industries, indexes for other sources of revenue.

Indexes may represent one of three kinds of product indexes. Every industry has primary product indexes to show changes in prices received by establishments classified in the industry for products made primarily, but not necessarily exclusively, by that industry. The industry classification of an establishment is determined by which products comprise a plurality of its total shipment value. In addition, most industries have secondary product indexes that show changes in prices received by establishments classified in the industry for products chiefly made in some other industry. Finally, some industries have miscellaneous receipts indexes to show price changes in other sources of revenue received by establishments within the industry that are not derived from sales of their products, for example, resales of purchased materials, or revenues from parking lots owned by a manufacturing plant.

### Data Collection

PPIs are based on selling prices reported by establishments of all sizes selected by probability sampling, with the probability of selection proportionate to size. Individual items and transaction terms from these firms are also chosen by probability proportionate to size. The BLS strongly encourages cooperating companies to supply actual transaction prices at the time of shipment to minimize the use of list prices. Prices submitted by survey respondents are effective on the Tuesday of the week containing the 13th day of the month. This survey is conducted primarily through the mail.

Price data are provided on a voluntary and confidential basis; only sworn BLS employees are allowed access to individual company price reports. BLS publishes price indexes instead of unit dollar prices. All PPIs are subject to revision 4 months after original publication to reflect the availability of late reports and corrections by respondents.

BLS periodically updates the PPI sample of survey respondents to better reflect current conditions when the structure, membership, technology, or product mix of an industry shifts significantly and to spread reporting burden among smaller firms. Results of these resampling efforts are incorporated into the PPI with the release of data for January and July.

As part of an ongoing effort to expand coverage to sectors of the economy other than mining and manufacturing, an increasing number of service sector industries have been introduced into the PPI. The following list of recently introduced industries includes the month and year in which an article describing the industry's content appeared in the *PPI Detailed Report*.

<i>Title</i>	<i>Code</i>	<i>PPI Detailed Report Issue</i>
	<i>SIC</i>	
Wireless telecommunications	4812	July 1999
Telephone communications, except radio telephone	4813	July 1995
Television broadcasting	4833	July 2002
Grocery stores	5411	July 2000
Meat and fish (seafood) markets	5421	July 2000
Fruit and vegetable markets	5431	July 2000
Candy, nut, and confectionery stores	5441	July 2000
Retail bakeries	5461	July 2000
Miscellaneous food stores	5499	July 2000
New car dealers	5511	July 2000
Gasoline service stations	5541	January 2002
Boat dealers	5551	January 2002
Recreational vehicle dealers	5561	January 2002
Miscellaneous retail	59	January 2001
Security brokers, dealers, and investment bankers	6211	January 2001
Investment advice	6282	January 2003
Life insurance carriers	6311	January 1999
Property and casualty insurance	6331	July 1998
Insurance agencies and brokerages	6412	January 2003
Operators and lessors of nonresidential buildings	6512	January 1996
Real estate agents and managers	6531	January 1996
Prepackaged software	7372	January 1998
Data processing services	7374	January 2002
Home health care services	8082	January 1997
Legal services	8111	January 1997
Engineering design, analysis, and consulting services	8711	January 1997
Architectural design, analysis, and consulting services	8712	January 1997
Premiums for property and casualty insurance	9331	July 1998
	<i>NAICS</i>	
Furniture and home furnishings stores	442	January 2004
Electronics and appliance stores	443	January 2004
Building material and garden equipment and supplies dealers	444	January 2004
Clothing and clothing accessories stores	448	January 2004
Sporting goods, hobby, book, and music stores	451	January 2004
General merchandise stores	452	January 2004
Miscellaneous store retailers	453	January 2004

## Weights

Weights for most traditional commodity groupings of the PPI, as well as weights for commodity-based aggregate indexes calculated using traditional commodity groupings, such as stage-of-processing indexes, currently reflect 1997 values of shipments as reported in the *Census of Manufactures* and other sources. From January 1996 through December 2001, PPI weights were derived from 1992 shipment values. Industry indexes also are now calculated with 1997 net output weights. This periodic update of the value weights used to calculate the PPI is done to more accurately reflect changes in production and marketing patterns in the economy. Net output values of shipments are used as weights for industry indexes. Net output values refer to the value of shipments from establishments within the industry to buyers outside the industry. However, weights for commodity price indexes are based on gross shipment values, including shipment values between establishments within the same industry. As a result, broad commodity grouping indexes, such as the PPI for All Commodities, are affected by the multiple counting of price change at successive stages of processing, which can lead to exaggerated or misleading signals about inflation. Stage-of-processing indexes partially correct this defect, but industry indexes consistently correct for this at all levels of aggregation. Therefore, industry and stage-of-processing indexes are more appropriate than broad commodity groupings for economic analysis of general price trends.

## Price Index Reference Base

Effective with publication of January 1988 data, many important PPI series (including stage-of-processing groupings and most commodity groups and individual items) were placed on a new reference base, 1982=100. From 1971 through 1987, the standard reference base for most PPI series was 1967=100. Except for rounding differences, the shift to the new reference base did not alter any previously published percent changes for affected PPI series. (See “Calculating Index Changes,” below.) The 1982 reference base is not used for commodity indexes with a base later than December 1981 or for industry net output indexes and their products.

For further information on the underlying concepts and methodology of the Producer Price Index, see chapter 14, “Producer Prices,” in *BLS Handbook of Methods* (April 1997), Bulletin 2490. This document can be downloaded from the BLS website at ([http://www.bls.gov/opub/hom/homch14\\_itc.htm](http://www.bls.gov/opub/hom/homch14_itc.htm)), and reprints are available on request.

## Calculating Index Changes

Each PPI measures price changes from a reference period which equals 100.0. An increase of 5.5 percent from the reference period in the Finished Goods Price Index, for example, is shown as 105.5. This change can also be expressed in dollars, as follows: Prices received by domestic producers of a sample of finished goods have risen from \$100 in 1982 to \$105.50. Likewise, a current index of 90.0 would indicate that prices received by producers of finished goods are 10 percent lower than they were in 1982.

Movements of price indexes from one month to another are usually expressed as percent changes, rather than as changes in index points. Index point changes are affected by the level of the index in relation to its base period, whereas percent changes are not. The following example shows the computation of index point and percent changes.

### *Index point change*

Finished Goods Price Index	107.5
Less previous index	104.0
Equals index point change	3.5

### *Index percent change*

Index point change	3.5
Divided by the previous index	104.0
Equals	0.034
Result multiplied by 100	0.034 x 100
Equals percent change	3.4

## Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, BLS publishes seasonally adjusted and unadjusted changes each month. Seasonally adjusted data are preferred for analyzing general price trends in the economy, because these data eliminate the effect of changes that normally occur at about the same time, and in about the same magnitude, every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For these reasons, seasonally adjusted data more clearly reveal underlying cyclical trends. Unadjusted data are of primary interest to users who need information that can be related to actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. It is the unadjusted data that are generally cited in escalating long-term contracts such as purchasing agreements or real estate leases. (See *Escalation and Producer Price Indexes: A Guide for Contracting Parties*, BLS Report 807, September 1991, available on request from the BLS.)

In 1998, the PPI implemented the X-12-ARIMA Seasonal Adjustment Method; prior to that year the PPI employed the X-11 method. Each year, the seasonal status of most commodity indexes is re-evaluated to reflect more recent price behavior. Industry net output indexes are not seasonally adjusted. For time series that exhibit seasonal pricing patterns, new seasonal factors are estimated and applied to the unadjusted data for the previous 5 years. These updated seasonally adjusted indexes replace the most recent 5 years of seasonal data.

Seasonal factors may be applied to series using either a direct or aggregative method. Generally, commodity indexes are seasonally adjusted using direct seasonal adjustment, which produces a more complete elimination of seasonal movements than the aggregative method. However, the direct seasonal adjustment process may not yield figures that possess additive consistency. Thus, a seasonally adjusted index for a broad category that is directly adjusted may not be logically consistent with all seasonally adjusted indexes for its components. Seasonal movements for stage-of-processing indexes are derived indirectly through an aggregative method that combines movements of a wide variety of subproduct class (6-digit) series.

Seasonally adjusted indexes can become problematic when previously stable and predictable price patterns abruptly change. If the new pattern persists, the seasonal adjustment method will eventually reflect it adequately; if these patterns keep shifting, however, seasonally adjusted data will become chronically troublesome. This problem occurs relatively infrequently for farm and food-related products but has more often affected manufactured products such as automobiles and steel.

Since January 1988, the PPI has used Intervention Analysis Seasonal Adjustment methods to enhance the calculation of seasonal factors. With this technique, outlier values that may distort the seasonal pattern are removed from the data prior to applying the standard seasonal factor estimation procedure. For example, a possible economic cause for large price movements for petroleum-based products might have been the Persian Gulf War. In this case, intervention techniques allowed for better estimates of seasonally adjusted data. On the whole, very few series have required intervention. Out of nearly 900 seasonally adjusted series, only 16 interventions were performed in 1997.

For more information relating to seasonal adjustment methods, see (1) "Appendix A: Seasonal Adjustment Methodology at BLS," in the *BLS Handbook of Methods* (April 1997), Bulletin 2490 and (2) "Summary of Changes to the PPI's Seasonal Adjustment Methodology" in the January 1995 issue of *Producer Price Indexes*.

### **Producer Price Index Data Via the Internet**

In 1995, the BLS began posting PPI series, news releases, and technical information to both a World Wide Web (WWW) site and a file transfer protocol (FTP) site. During the years following the introduction of PPI Internet services, usage of these sites eclipsed more traditional methods of data dissemination, such as subscriptions to the *PPI Detailed Report*. There were more than 1.6 million accesses of PPI series over the Internet during the 12 months ended December 31, 2003.

### **Retrieving PPI data from the PPI Website**

PPI data can be obtained from the WWW address (<http://www.bls.gov/ppi>). Scrolling down the page to the "Get Detailed Statistics" header reveals the following 5 methods of data retrieval:

- **Most Requested Series** is a form-based application that allows the user to quickly obtain PPI time series data by selecting from two separate lists (commodity and industry) of the most commonly requested time series, including the All Commodities Index and the stage-of-processing indexes (for example, Finished Goods). Within each list, any one—or all—of the time series shown can be selected. A user can modify the date range and output options after executing the query, using the reformat button above the data output table.
- **Create Customized Tables** is a form-based query application designed for users unfamiliar with the PPI coding structure. It guides a user through the PPI classification system by listing index titles and does not require knowledge of commodity or industry codes. Data retrieved are based on a query formulated by selecting data characteristics from lists provided. Two options are available to create customized tables, depending on a user's browser capability. The one-screen option is a JavaScript application that uses a single screen to guide a user through the available time series data. The second option is a multiple screen, nonJava-based application. Both methods allow a user to browse the PPI coding structure and select multiple series codes. Using the one-screen option, users can modify the date range and output options after executing the query using the reformat button above the data output table.
- **Series Report** is a form-based application that uses formatted PPI time series identifiers (commodity or industry codes) as input in extracting data according to a specified set of date ranges and output options. This application provides the most efficient path for those users who are familiar with the format of PPI time series identifiers. Up to 300 indexes can be extracted at one time.

There are three basic formats for creating a unique PPI time series identifier. For commodity and stage-of-processing indexes, enter a "wpu" prefix (not seasonally adjusted) or a "wps" prefix (seasonally adjusted) in combination with a commodity-based code to create a series identifier.

#### **Commodity code**

wps063  
wpu063803  
wpusop3000

#### **Will provide data for:**

Drugs and pharmaceuticals, seasonally adjusted  
Pharmaceutical preparations, cardiovascular system  
Finished goods, not seasonally adjusted

For a current industry-based price index organized according to the North American Industry Classification System (NAICS), enter the prefix “pcu” followed by the industry-product code. The series identifier for products primary to an industry include 12 numeric digits, the six-digit industry code is repeated, and up to seven additional digits of product detail. Dashes are used as place holders for higher-level industry group codes.

**Industry-product code,  
Current NAICS series**

pcu325---325---  
pcu336110336110  
pcu621111621111411

**Will provide data for:**

Chemical manufacturing, not seasonally adjusted  
Automobile and light duty motor vehicle manufacturing  
Offices of physicians, one and two physician practices and single specialty group practices, general/family practice

To identify a discontinued industry-product code based on the Standard Industrial Classification (SIC), enter a “pdu” prefix and “#” between the fourth and fifth characters of the product code. A series identifier for the discontinued dataset uses underscores as placeholders to complete a reference to an SIC industry group code of less than four digits. (All PPI industry-based indexes organized by SIC were discontinued with the introduction of the NAICS.) *In all cases, no spaces are permitted.*

**Industry-product code,  
Discontinued SIC series**

pdu28\_#  
pdu331\_#  
pdu3711#111

**Will provide data for:**

Chemicals and allied products, not seasonally adjusted  
Blast furnaces, steel works, and rolling and finishing mills, not seasonally adjusted  
Passenger cars

- **Flat Files** and the FTP server are best suited for those users requiring access to either a large volume of time series data or other PPI-related documentation (such as, seasonal factor and relative importance tables). The FTP site can be accessed at (<ftp://ftp.bls.gov>) or directly from the links on the “Get Detailed Statistics” page or the PPI homepage. Data and documentation available for download include:

Directory:

- NAICS Current Series /[pub/time.series/pc](#)
- SIC Discontinued Series /[pub/time.series/pd](#)
- Commodity Series /[pub/time.series/wp](#)
- Special Requests /[pub/special.requests/ppi](#)
- Latest News Release /[pub/news.release/ppi.txt](#)

The FTP site maintains files to help with searches and downloads. These files are centrally located in the [/pub/doc](#) directory. Within this directory, go to the [overview.txt](#) file for an overview relating to all BLS data available through the FTP site. For commodity-based PPI data (which appear in tables 1, 2, 3, 6, 7, and 8 of the PPI monthly detailed report and tables 1, 2, 3, and 5 of the monthly news release), the program help file is [wp.txt](#). For *current* industry-based PPI data based on the NAICS (which appear in tables 4, 5, and 9 of the monthly PPI report and table 4 of the monthly news release), the file is [pc.txt](#). For industry-based SIC time series that have been *discontinued*, go to [pd.txt](#). (These and other help files are also maintained within each of the five directories listed above.)

### Other Sources of PPI Data

PPI data can also be accessed via the BLS homepage (<http://www.bls.gov>). After clicking the “Get Detailed Statistics” link at the top of the homepage a chart appears listing all of the available BLS programs. The following four methods are available for PPI data: Most requested statistics, create customized tables (one screen or multiple screens), and flat files. Additional sources of BLS data are also accessible from this page including: Economic news releases, series report, and economy at a glance.

### Additional information

The PPI homepage (<http://www.bls.gov/ppi>) contains additional information regarding PPI data and methodology. The top section of the homepage provides PPI news releases, both current and archived, as well as general PPI information. The “Tables Created by BLS” section found beneath the statistics section provides relative importance and seasonal factor tables. The remaining sections offer special notices and publications pertaining to PPI methodology and applications.

For questions or comments regarding PPI data classification, methodology, or data availability on the Internet, call or e-mail the Section of Index Analysis and Public Information directly at (202) 691-7705 or [ppi-info@bls.gov](mailto:ppi-info@bls.gov). Data also can be obtained by calling the national fax-on-demand service at (202) 691-6325; this service enables customers to request faxes of BLS data 24 hours a day, 7 days a week.

Table 1. Producer price indexes and percent changes by stage of processing (1982=100)

Grouping	Relative importance	Unadjusted index				Unadjusted percent change to Jan. 2004 from:		Seasonally adjusted percent change from:		
		Dec.	Sept.	Dec.	Jan.	Jan.	Dec.	Oct. to Nov.	Nov. to Dec.	Dec. to Jan.

721	Accommodation.....	12/96	120.4	120.5	121.3	-.2	.7

1/ Indexes in this table are derived from the net-output-weighted industry price indexes. Because of differences in coverage and aggregation methodology, they will generally not match the movements of similarly titled indexes which are derived from traditional commodity groupings.

2/ The indexes for September 2003 have been recalculated to incorporate late reports and corrections by respondents. All indexes are subject to revision 4 months after original publication.

3/ Not available.

Note: NAICS 2002 replaced the SIC classification system beginning with the release of PPI data for January 2004.

Table 5. Producer price indexes by stage of processing, seasonally adjusted  
(1982=100)

Grouping	Index 1/					
	Aug. 2003	Sep. 2003	Oct. 2003	Nov. 2003	Dec. 2003	Jan. 2004
Finished goods.....	143.5	143.8	144.8	144.5	144.8	145.7

Materials for durable manufacturing.....	127.4	128.5	129.6	130.6	131.2	132.5
Components for manufacturing.....	125.9	125.9	125.8	125.7	125.7	125.9
Materials and components for construction.....	153.5	154.9	155.3	156.0	155.9	156.3
Processed fuels and lubricants.....	114.6	113.0	113.1	110.7	112.8	115.8
Manufacturing industries.....	119.7	118.4	117.4	115.8	115.8	117.7
Nonmanufacturing industries.....	111.4	109.6	110.4	107.5	110.9	114.7
Containers.....	153.6	153.5	153.2	153.5	153.4	153.9
Supplies.....	141.2	141.6	141.9	142.7	142.7	143.3
Manufacturing industries.....	146.7	146.7	146.6	146.9	147.0	147.2
Nonmanufacturing industries.....	138.6	139.2	139.5	140.4	140.5	141.2
Feeds.....	101.5	107.8	108.4	117.9	117.2	117.7
Other supplies.....	143.2	143.2	143.4	143.5	143.6	144.4
Crude materials for further processing.....	130.6	134.1	138.2	138.4	141.4	145.3
Foodstuffs and feedstuffs.....	110.0	117.7	127.4	127.4	127.2	118.4
Nonfood materials.....	142.6	142.8	142.1	142.5	148.0	161.8
Nonfood materials except fuel 2/.....	117.0	113.9	119.4	121.2	124.7	130.9
Manufacturing 2/.....	107.6	104.6	109.8	111.5	114.8	120.6
Construction.....	180.2	181.2	182.3	182.6	184.9	186.3
Crude fuel 3/.....	171.2	176.9	165.8	163.8	172.1	197.6
Manufacturing industries.....	163.0	168.4	158.2	156.3	163.9	187.3
Nonmanufacturing industries.....	175.1	180.9	169.5	167.4	176.0	202.1
Special groupings						
Finished goods, excluding foods.....	142.6	142.6	143.0	142.8	143.1	144.8
Intermediate materials less foods and feeds.....	134.6	134.4	134.7	134.4	135.0	136.3
Intermediate foods and feeds.....	124.4	127.8	131.1	134.7	134.0	132.7
Crude materials less agricultural products 2/.....	144.7	144.7	143.4	143.6	149.5	163.8
Finished energy goods.....	102.9	102.8	102.5	101.6	103.2	108.0
Finished goods less energy.....	149.0	149.5	150.7	150.6	150.6	150.3
Finished consumer goods less energy.....	153.0	153.7	155.2	155.2	155.1	154.6
Finished goods less foods and energy.....	150.5	150.5	151.2	151.2	151.0	151.4
Finished consumer goods less foods and energy.....	157.8	157.8	158.4	158.5	158.3	158.8
Consumer nondurable goods less foods and energy..	177.9	178.1	178.2	178.2	178.2	178.6
Intermediate energy goods.....	114.4	112.1	112.2	109.9	111.9	114.9
Intermediate materials less energy.....	137.5	138.0	138.5	139.0	139.1	139.8
Intermediate materials less foods and energy.....	138.4	138.7	139.1	139.4	139.6	140.4
Crude energy materials 2/.....	139.7	138.2	135.7	133.6	139.3	156.7
Crude materials less energy.....	120.5	127.2	135.4	137.1	138.3	133.5
Crude nonfood materials less energy 3/.....	151.5	155.6	159.6	166.1	171.1	176.8

1/ All seasonally adjusted indexes are subject to change up to 5 years after original publication due to the recalculation of seasonal factors each January. The indexes for September 2003 have been recalculated to incorporate late reports and corrections by respondents.

2/ Includes crude petroleum.

3/ Excludes crude petroleum.
